

**kompas on campus**

**The University of Wuppertal relies on Digital Signage made by dimedis: On the 15<sup>th</sup> of November, the campus-wide information system for University employees, visitors and students was officially put into operation.**

A total of ten 46 inch large screens is spread across the three campus locations Griffenberg, Freudenberg and Haspel. They offer the viewer lots of information revolving around university life, supplemented by news headlines, weather reports, public transport schedules, event tips and the like.

The contents of the displays at all three sites are managed centrally via the kompas web interface. Most of the content updates itself automatically. The design of templates is freely customizable, guaranteeing that all content integrates seamlessly with the corporate design of the University.

The project at the University of Wuppertal once again proves the flexibility and versatility of kompas, which adapts itself perfectly to any given task.

kompas, developed by the experts in digital media distribution at dimedis GmbH, is one of the most powerful and flexible digital signage systems on the market. It combines maximum stability with cost-efficient mobile technology and offers solutions for a vast number of different applications.
